Python – Programming Assignment 1

Professor:
Dr. Joanna Bieri
joanna_bieri@redlands.edu

Directions: Create Python code that fills in a Madlibs story.

Specifications:

- A the top of your code you should define a minimum of 6 variables (at least one string, one integer, and one float).

- Use the format function to print a story that uses your variables

  f"This is my story and I like {myvariable}..."

- Within the code: change one of your string variables to all upper case and add 1 to an integer variable.

- Your code should print out the full story with the changes above.

- Your story should have correct spacing between words.

- Your code should be a .py file

- Your code should be submitted on time.
